Feature management software definition

Feature management software facilitates the orchestration of feature rollouts and rollbacks for deployed applications. Developers use this software to manage feature flags, or "toggles," that control whether a given feature is live in an application. Feature management software relieves the logistical complexities of managing feature flags by providing a centralized hub for granular control and monitoring.

Development teams can also use feature management software to perform A/B testing by selectively rolling out features to specific target groups among their user base, and then tracking performance and other metrics.

To qualify for inclusion in the Feature Management category, a product must:

✓ Provide a centralized hub for feature flag management

✓ Allow users to perform selective feature rollouts and rollbacks

✓ Allow teams to monitor live features for issues
Feature management Grid® scoring description

Products shown on the Grid® for Feature Management have received a minimum of 10 reviews/ratings in data gathered by August 30, 2022. Products are ranked by customer satisfaction (based on user reviews) and market presence (based on market share, seller size, and social impact) and placed into four categories on the Grid®:

1 Products in the Leader quadrant are rated highly by G2 users and have substantial Market Presence scores. Leaders include: LaunchDarkly, CloudBees Feature Management, Optimizely Web Experimentation, and Split

2 High Performing products have high customer Satisfaction scores and low Market Presence compared to the rest of the category. High Performers include: ConfigCat

3 Contender products have relatively low customer Satisfaction scores and high Market Presence compared to the rest of the category. While they may have positive reviews, they do not have enough reviews to validate those ratings. Contenders include: Optimizely Full Stack, AB Tasty, and VWO Testing

4 Niche products have relatively low Satisfaction scores and low Market Presence compared to the rest of the category. While they may have positive reviews, they do not have enough reviews to validate those ratings. Niche products include: Flagsmith and Apptimize

Grid® scores for feature management software

The table below shows the Satisfaction and Market Presence scores that determine product placement on the Grid®. To learn more about each of the products, please see the profile section.

Leaders	# of reviews	Satisfaction	Market Presence	G2 Score
LaunchDarkly	80	93	94	94
Cloudbees Feature Management	121	93	79	86
Optimizely Web Experimentation	153	59	92	76
Split	27	64	53	59
High Performers				
ConfigCat	14	51	14	32
Contenders				
Optimizely Full Stack	44	46	78	62
AB Tasty	33	40	63	52
VWO Testing	15	46	51	49
Niche				
Flagsmith	16	49	6	28
Apptimize	18	8	10	9

Grid® rating methodology

The Grid® represents the democratic voice of real software users, rather than the subjective opinion of one analyst. G2 rates products from the Feature Management category algorithmically based on data sourced from product reviews shared by G2 users and data aggregated from online sources and social networks.

Technology buyers can use the Grid® to help them quickly select the best products for their businesses and to find peers with similar experiences. For sellers, media, investors, and analysts, the Grid® provides benchmarks for product comparison and market trend analysis.
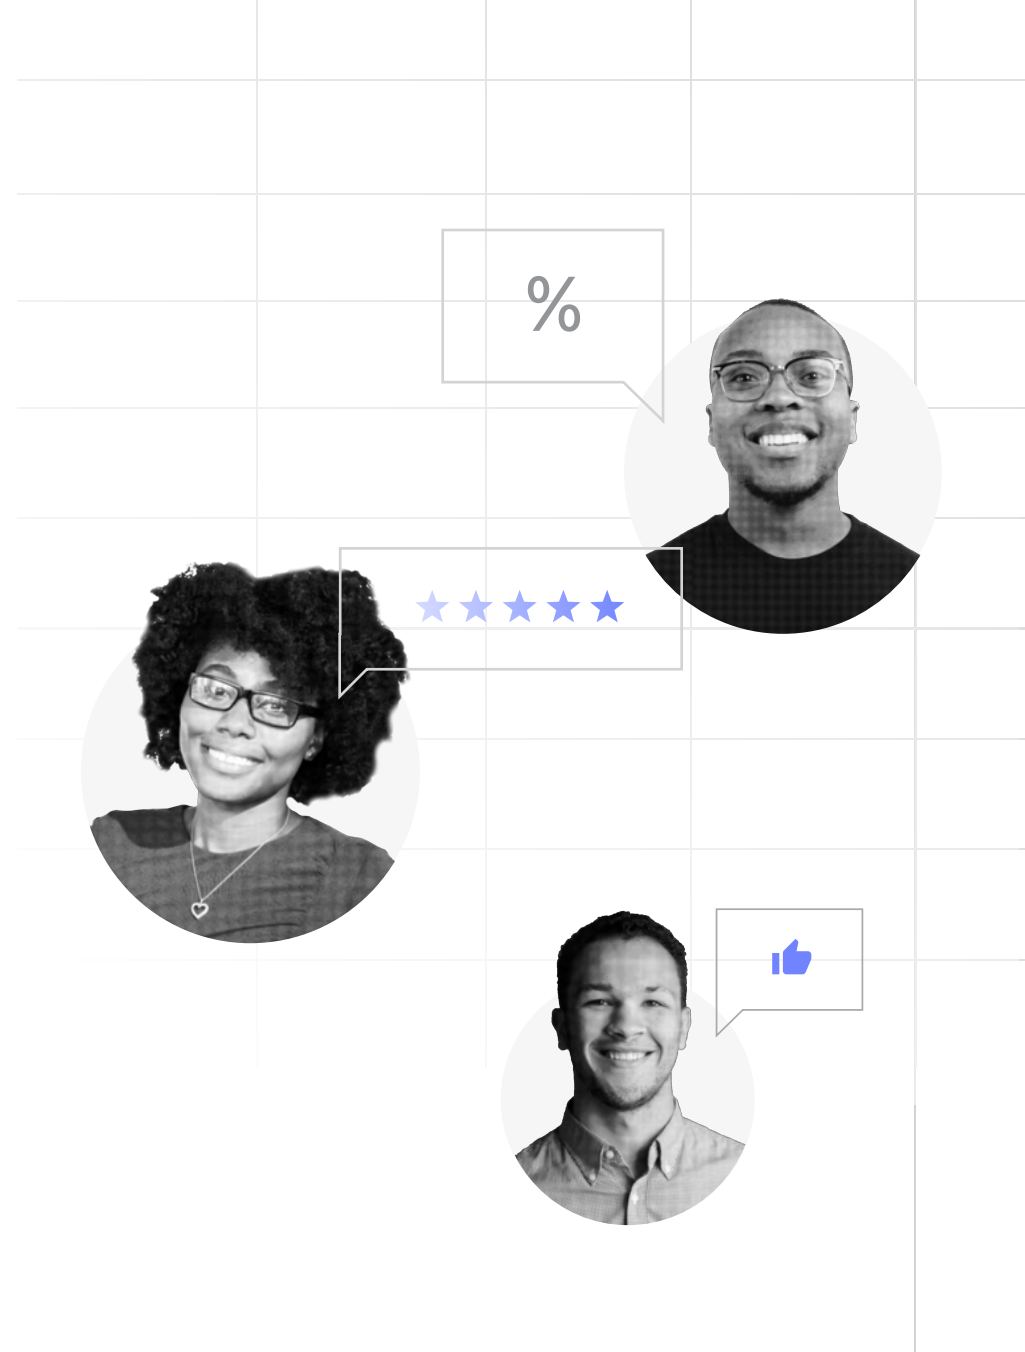

Grid® scoring methodology

G2 rates products and sellers based on reviews gathered from our user community, as well as data aggregated from online sources and social networks. We apply a unique algorithm (v3.0) to this data to calculate the Satisfaction and Market Presence scores in real time. The Grid® Report for Feature Management | Fall 2022 is based on scores calculated using the G2 algorithm v3.0 from reviews collected through August 30, 2022. To view the Feature Management Grid® with the most recent data, please visit the [Feature Management](#) page.

Note: The customer satisfaction score is normalized for each Grid®, meaning the scores are relative.

Satisfaction

The Satisfaction rating is affected by the following (in order of importance):

- Customer satisfaction with end user-focused product attributes based on user reviews

- Popularity and statistical significance based on the number of reviews received by G2

- Quality of reviews received (reviews that are more thoroughly completed will be weighted more heavily)

- Age of reviews (more-recent reviews provide relevant and up-to-date information that is reflective of the current state of a product)

- Customers' satisfaction with administration-specific product attributes based on user reviews

- Overall customer satisfaction and Net Promoter Score® (NPS) based on ratings by G2 users

Market Presence

The Market Presence score is affected by the following (in order of importance):

- Market presence is a combination of 15 metrics from G2's reviews, publicly available information, and third-party sources

- Both the software sellers and the individual products are measured on various criteria. The criteria are listed in order of importance. Products metric receive greater weight than seller metrics

- Each input is normalized by category and segment.

- This means that scores are relative to other products in the category/segment and may change from segment to segment

- The scores are then scaled from 0-100

Criteria	Metrics
Number of employees	Employee count (based on social networks and public sources)
Reviews	Review count (weighted by recency)
Web Presence	
Social Presence	
Growth	Employee growth, Web presence growth
Seller Age	
Employee Satisfaction and Engagement	

Grid® categorization methodology

Making G2 research relevant and easy for people to use as they evaluate and select business software products is one of our most important goals. In support of that goal, organizing products and software companies in a well-defined structure that makes capturing, evaluating, and displaying reviews and other research in an orderly manner is a critical part of the research process.

To manage the process of categorizing the software products and the related reviews in the G2 community, G2 follows a publicly available categorization methodology. All products appearing on the Grid® have passed through G2's categorization methodology and meet G2's category standards.

Many terms that appear regularly across G2 and are used to aid in product categorization warrant a definition to facilitate buyer understanding. These terms may be included within reviews from the G2 community or in executive summaries for products included on the Grid®.

A list of standard definitions is available to G2 users to eliminate confusion and ease the buying process.

Rating Changes and Dynamics

The ratings in this report are based on a snapshot of the user reviews and social data collected by G2 up through August 30, 2022. The ratings may change

as the products are further developed, the sellers grow, and as additional opinions are shared by users.

G2 updates the ratings on its website in real time as additional data is received, and this report will be updated as significant data is received. By improving their products and support and/or by having more satisfied customer voices heard, Contenders may become Leaders and Niche sellers may become High Performers.

Trust

Keeping our ratings unbiased is our top priority. We require the use of a LinkedIn account or verified business email address to validate a G2 user's identity and employer.

We also validate users by partnering with sellers and organizations to securely authenticate users through select platforms. We do not allow users to review their current or former employers' products, or those of their employers' competitors.

Additionally, all reviews are manually checked by our team after our algorithm filters out reviews that don't meet our submission requirements. All reviews must pass our moderation process before they are published.

Our G2 staff does not add any subjective input to the ratings, which are determined algorithmically based on data aggregated from publicly available online sources and social networks. Sellers cannot influence their ratings by spending time or money with us. Only the opinion of real users and data from public sources factor into the ratings.

Grid® inclusion criteria

All products in a G2 category that have at least 10 reviews from real users of the product are included on the Grid®. Inviting other users, such as colleagues and peers, to join G2 and share authentic product reviews will accelerate this process.

If a product is not yet listed on G2 and it fits the market definition above, then users are encouraged to suggest its addition to our Feature Management category.

Product Profiles

Product profiles and detailed charts are included for products with 10 or more reviews.

About LaunchDarkly

LaunchDarkly isn't just a leader in feature management — it's the first scalable feature management platform. Feature management allows development teams to innovate faster by fundamentally transforming how software is delivered to customers. With the ability to gradually release new software features to any segment of users on any platform, DevOps teams can standardize safe releases at scale, accelerate their journey to the cloud and collaborate more effectively with business teams.

Today, LaunchDarkly deploys peaks of 20 trillion feature flags each day, and that number continues to grow. Founded in 2014 in Oakland, California by Edith Harbaugh and John Kodumal, LaunchDarkly has been named on the Forbes Cloud 100 list, InfoWorld's 2021 Technology of the Year list, and the Enterprise Tech 30 list.
